# CONNECTOR for Concur & Deltek

Providing a seamless, two-way sync between Concur, Deltek and HR

Apextech's Connector for Concur & Deltek eliminates manual data manipulation through a bidirectional sync between Concur, Deltek and your HR system. The Connector for Concur & Deltek improves the accuracy and efficiency of the cost accounting process related to federal contracts and grants. The Connector for Concur & Deltek uses Concur web services to seamlessly connect with invoice, expense, project assignments and employee information. And because the system resides on Microsoft's Azure cloud platform, no software needs to be installed.

Connector for Concur & Deltek can handle a variety of mapping rules and logic to transform source data into financial transactions that can be consumed by the general ledger and accounts payable modules or payroll systems.

New employee, supervisor and employee changes can be integrated from ADP, Ultipro or other HR systems with Concur, eliminating the need to enter employee data in multiple systems.
